This tool also allows users to recover WPA/WPA2/WPS Passwords of Greek IP addresses. This app is developed by a very long time Greek expat living in the United States who experienced difficulties to solve an encrypted network issue on his smartphone. He decided to create a free tool to help people and the result was the Greek WPA Finder. Key Features Free and Open-Source Reportedly works on Android and iOS devices (iPhone & iPad). Easy to use Free version is ad-supported. Premium version is ad-free, has no in-app purchases and can be used forever. No ads in the free version. Easy to use. Based on open-source repository. Recovers WPA and WPA2 passwords from specific brands of routers. Recovers WPA/WPA2/WPS Passwords of Greek IP addresses. Recovers passwords of non-Greek IP addresses from a database of 2 million IP addresses obtained from Alexa. Recovers passwords of IP addresses in a specific city (province) within a country. Recovers

WPA/WPA2/WPS Passwords from a specific IP address. Overview The main idea behind the app's development was that every person on the planet is interconnected in a WiFi network. We can all exchange files, chat, etc. through WiFi network. Every time a new network is found, we get an IP address. That's why it is possible to recover the password of this network. A computer and the app can act as a WiFi hotspot. It can use your phone's data plan to become a WiFi hotspot. It can also be turned into a WiFi hotspot using a WiFi extender. In order to do that, the hotspot must be connected to a router (LAN port) and it must have an IP address, which can be found by running the Greek WPA Finder. The computer can be connected to any router with a LAN port. This is why we use the IP addresses to find the router's password.
